

D.I.V.E - Diving Deeper

Beginning in January, we kick off our new Small Group effort called **D.I.V.E.** Teams.

Disciple, Intercede, Visit (fellowship), and Evangelize

"Diving Deeper in your Relationship with Christ and Fellow Believers"

Tables will be set up in the Church Atrium before and after both services on Sunday to give folks an opportunity to both volunteer to host or lead a Team, and to sign up to become involved as a Team Member.

There are many interesting facts about DIVING and Keith will be sharing much more in the near future. But here are just a few interesting bits:

- The record for diving depth was set in 1960 at 6.8 miles--we don't seem to go as deep today, as we did in the 60's.
 - Most divers stop at about 130 feet--that's when surface light stops and it becomes totally dark.
 - Don't dive too quickly, if you go deeper than 30 feet per minute, it can cause bubbles in your bloodstream.
 - Don't hold your breath. It prevents you from going deeper.
 - Don't Touch, Take, or Tease anything while diving.
 - Two types of deep water fish have no fear of humans. AND they will kill you: Trigger Fish, Clown Fish--Moral of the story stay away from Triggers & Clowns!
 - MOST People prefer to snorkel and never go deeper than 16 feet. Are you a snorkeler?
-
